compliance.

Empower
the first lines of
defense.

AUTOMATE YOUR REVIEW TO MAKE IT A SIMPLE, QUICK AND EFFECTIVE EXERCISE

Analyze your user access rights and launch reviews with the best identity correlation solution.

Brainwave Identity Analytics is designed and based on a simple but fundamental principle: only accurate, complete and validated data can allow for the making of sound decisions. By implementing and correlating all data sources present in your company's information systems (HR, Active Directory, PAM, CMDB, logs), Brainwave Identity Analytics can ingest it and immediately provide you with customized analyses and recommendations with unmatched insight and depth. Set up access rights reviews in just a few clicks and launch corrective actions equally as fast.

With Brainwave Identity Analytics, opt for a continuous, proactive approach to access rights control and fix problems as soon as they are detected.

With the correlation power of Brainwave Identity Analytics, identify who works for the company, who can access which infrastructures, applications or data, and what privileged accounts are present in your information systems.

With the advanced capabilities of Brainwave Identity Analytics, check for quality issues, orphaned and blocked accounts, and accounts of people who have left the company in addition to ensuring that the principles of separation of duties and security policies are being respected.

With the machine learning and data visualization technologies of Brainwave Identity Analytics, detect user risk, residual access rights, atypical situations and abnormal changes.

With the review engine and campaign manager in Brainwave Identity Analytics, involve business managers and easily launch campaigns, take advantage of intuitive and accessible interfaces and save time by simplifying the process for all stakeholders.

With the ease of connecting Brainwave Identity Analytics to third-party solutions, implement user access review decisions and automatically minimize anomalies by leveraging your company's change management process.

Communicate with and empower your business line managers

- Create and publish dashboards and analyses.
- Provide designated access to stakeholders (line managers, resource owners. etc.).
- Share information, reports and key performance indicators.

Improve the quality of your repositories

- Reconcile identities and user accounts with automatic data correlation.
- Document and enhance data to make it understandable to everyone.
- Appoint the owners of the company's assets to automate the review.
- Rank identities and resources by risk level and sensitivity in order to fine tune the review strategy.
- Define roles that fit within the business context.
